

European Commission LIFE Environment program co-financed project
"Adaptation of Water Framework Directive and Habitats Directive harmonization and integrated actions for freshwater quality improvement in Salaca river sub catchment"

(LIFE IS SALACA)

Grant agreement 101114155 — LIFE22-ENV-LV-LIFE IS SALACA

Deliverable D2.8. Annotation in English

"List of hydromorphological and biological monitoring sites"

Activity T.2.4.2 Site selection for hydromorphology assessment, monitoring sites and selection of most suitable methodology

Authors: LEGMC, NCA

31.05.2024

Annotation

The delivery consists of two parts: the GIS data in a shape file format and the explanatory text in a MS Word file. The shape file shows information about the spatial location of the monitoring stations, and there are marked places where the hydromorphological quality assessment will take place in order to assess the efficiency of the planned management measures and harmonize the quality/status according to the EU Water Framework Directive and Habitat Directive. The MS Word file provides information on the rationale for selection of monitoring locations/stations and the total scope of work.
